

Communication of 12<sup>th</sup> April 2011

## Update of ICS phase 1

### MRN generation

In order to harmonize the timing of response message of ENS (ENtry Summary declaration) from **18<sup>th</sup> April 2011** the Irisp file containing the MRN (Movement Reference Number) of the ENS will be sent immediately upon registration.

According to the provisions of Reg. (CE) 1875/2006 (from art. 184 d, par. 2) in the case of containers for "long-haul" travel, the ENS must be given at least 24 hours before beginning of loading. In such cases the possible "Do not load" can be notified within 24 hours of registration MRN and the file Irisp will be updated with message IE351 instead of IE328. The data models are available in the "**Appendice: tracciati record**", section "**[Ti aiuto?](#)**" of the **STD-EDI web site** ("**ambiente reale**" - real environment).
